

OxAlpha Protocol - Whitepaper

OXA - the native token of an automated arbitrage engine
on BNB Smart Chain (BEP-20).

Tokenomics:

- Fixed supply: 100,000,000 OXA
- No mint function, no founder allocations
- Hard-coded max tax: 20%

Fee distribution on every successful operation:

- 50% BURN (deflationary pressure)
- 50% REFLECT to holders

Security:

- Ownership via Timelock, final renouncement planned
- Verified contract on BscScan

Human + AI Collaboration protocol.

Contact: oxalpha.ia@gmail.com

How the Engine Works

The engine continuously monitors price differences for the same asset across markets and exchanges.

When a spread imbalance appears, it executes instant trades to capture the price gap.

Fees from each successful operation are split:
50% burned, 50% reflected to all holders.

Roadmap:

1. Token launch and liquidity lock
2. BscScan token info listing
3. Engine public dashboard
4. Community governance
